

EXPERIMENT BOUNCING BUBBLES

INGREDIENTS

4 tbsp (60ml) Water
2 tbsp (30g) Sugar
1 tbsp (15ml) Dish Soap
Straw
Glove or sock

METHOD

Mix all of the ingredients together & dip the straw into the mixture. Once there is a bubble film at the end of the straw, blow gently into the other end to make a bubble. Try bouncing the bubble on your hand wearing the glove/sock.

It's possible to bounce bubbles because the bubble doesn't come in contact with the oil on our hands which breaks surface tension. Some gloves work and some gloves don't so if it doesn't work, try a different glove or sock!
